¹1 Inverter max input PV power is 20,000 Wp when long strings are designed and fully connected with SUN2000-450W-P, SUN2000-450W-P2, SUN2000-600W-P power optimizers.

²2 The maximum input voltage is the upper limit of the DC voltage. Any higher input DC voltage would probably damage inverter.

³3 Any DC input voltage beyond the operating voltage range may result in inverter improper operating.

⁴4 SUN2000-10KTL-BEM1 raises potential between PV- and ground to above zero through integrated PID recovery function to recover module degradation from PID. Supported module types include: P-type (mono, poly).

⁵5 <10 W when PID recovery function is activated.
